

Halton Marine Navy Segment

References

Halton Marine, one of the world's leading suppliers of marine HVAC, develops, manufactures and markets reliable, high-quality ventilation solutions specifically designed for the oil & gas, navy and marine applications. Halton Marine's main product groups are HVAC dampers, galley and cabin ventilation, airflow distribution and management products.

Safety is the most important factor in extreme working conditions where a fire could put people's life at risk unless necessary precautions are taken. Therefore it is essential that the equipment chosen is top-class. Halton supplies robust, high-quality fire and gas dampers that are recognized by the leading oil-companies, owners and major classification societies world-wide.

The technical quality and proper functioning of Halton's solutions, built in state-of-the-art production facilities, are tested in Halton's own laboratories and in independent research laboratories around the world. Typical tests include: leakage tests, fire tests, shock tests and FAT for project. Halton's R&D centers offer Indoor Climate Testing services to test and verify the performance of each solution.

Scope of supply

- A wide range of high-quality dampers for navy applications
- High-efficiency galley ventilation equipment including UV-light technology
- A complete air-conditioning package for cabin ventilation
- Airflow management and distribution products

When Safety and Comfort Matter
